Granular Controlled Release Blend

Product Description

Fully coated, granular, controlled release, complete spectrum of macro and micronutrients fertilizer, designed for either a top dress application or to be incorporated into the potting soil.

List Of Ingredients

- Stabilized granulated urea – two sources, designed for a wider spectrum of release time. Urease inhibitor included to prevent volatilization and loss of nitrogen.
- Potassium sulfate – granular
- Mono ammonium phosphate – granular
- Calcium phosphate – granular
- Granulated lime
- Granulated humic acid
- Coated micronutrients (Iron, Boron, Manganese, Zinc, Copper, Molybdenum, Cobalt)

TC™ NOW UTILIZING TRUE-COTE™ TECHNOLOGY

Application Instructions

We recommend an application rate of 2-3 cups (1-1.5 lbs.) per 100 square feet every 3-4 weeks. This is a generalized feeding rate, and may be adjusted based on your particular growing needs. If ever in doubt, apply less, but more often. For smaller sized containers, use 1 tsp. per gallon of soil, or approximately 1 tbsp. for every 1 foot of plant height. For incorporating the product into the soil, apply 1.5-2.5 lbs per 10 cubic feet.

Selling Features and Marketing Information

- Perfectly engineered blend of macro and micronutrients designed specifically for the early stages of vegetative growth.
- Two sources of nitrogen designed to deliver continuous flow of controlled released fertilizer that will not burn or damage your plants.
- Release rates will depend on the outside temperature, humidity, rainfall and microbial action. Hot, wet climates will need to apply less of the product to prevent accidental over fertilization.
- Proprietary, custom blended formulation, designed to neutralize acidic soils and prevent nutrient deficiencies and lock out. Will bring most soils into the correct pH range.
- Uniformly distributed micronutrients allow for an even application. "Every handful is the same each and every time!"
- Unique humic acid blend designed to improve soil consistency, tilth, microbial activity, water retention and natural chelation. Breaks down heavy salts. It is dust-free and the only formula on the market to contain these added benefits.
- Easy to either broadcast, top dress, or incorporate into the planting medium.
